

*That's what you get with  
Integron's Technical Logistics...  
Its more than a pick and forward  
or return sort and forward.*

## 100% process. 100% control. 100% happiness.

**YOU'RE ACCOUNTABLE FOR CREATING SUPPLY CHAIN VALUE THROUGHOUT THE PRODUCT LIFE CYCLE.** What if you could make customers and field engineers happy by providing product that has been fully integrated with the latest configuration built to customer spec. And when a part of the system fails provide them with advance unit replacements to the same customization, and at the same time rapidly place used product back into the supply chain. What if your logistics provider had the technical know-how to customize orders; even repair, refurbish, perform strip and salvage functions to turn these assets into cash. What if at the end of lease you could refurbish the technology and realize the ROI of yet another 2 year lease. What if you could track each one of them—its repair history, and configuration. And what if you could compute the total cost that customization and recycling each of these assets translates into for your company. You just might end up saving thousands of dollars. Who's smiling now?

It's all possible with INTEGRON Asset Management System. It's a suite of proven software and processes adding value to the forward and reverse flow of product including:

- Order fulfilment configured to customer spec for immediate productivity
- Advanced unit replacement configured to spec reducing downtime
- Spare part replenishment same day or next day with forward stocking locations
- Return spare part test / repair and transfer back into forward supply
- End of lease whole unit repair / recondition for resale
- Strip and salvage for reuse or resale

### **WE RECOGNIZE ROI IS TIED TO CHANGING MARKET CONDITIONS; THAT'S WHY THE SLA'S ARE SCALABLE.**

It's not business as usual - Business process engineering is a vital part of the program success to include direct data exchange for efficiency and low cost of doing business for our customers. Integron delivers productivity improvements with automated test processes maximizing quality and again minimizing cost. All this while your engineers work on forward technology.

**YOU'VE NEVER BEEN ABLE TO TRACK ASSETS LIKE THIS BEFORE.** The system is accessed through a customized Web portal. It lets you view and monitor the activity of every single asset in the cycle. With INTEGRON Asset Management System, you can track real-time data like never before—by individual client, location or serial number.

- Measure complete performance by percentage of hardware failures, type of failure, and no problems found
- Reconcile spares inventory to real-time activity—no more paying for additional spare parts with an effective returns program
- Monitor overall trends, analyze costs, and understand total cost of the 360<sup>o</sup> delivery solution

Are you learning anything from Product Lifecycle Logistics? Real time equipment activity throughout the life cycle is tracked for analysis. From initial deployment, configuration change, device failure and subsequent movement in the field. All of these functions and more are detailed for review with INTEGRON Asset Management System.
